

Project Summary:

Creating a new home for our Comprehensive Cardiovascular Suite within our Jennie Edmundson Hospital Footprint.

The statistics are hard to ignore. Heart disease continues to be the leading cause of death in the U.S. for both men and women.

Our community counts on us to provide the most advance care possible. Our current Cath Labs are 16 years old. We must reinvest to ensure the future of cardiac and vascular care for patients in southwest and western Iowa. Otherwise, patients from across our region might have to be transferred to another hospital miles away at a time when every second counts.

Creating a new Comprehensive Cardiovascular Suite with advanced navigation and imaging technology will bring Jennie Edmundson Hospital to a new level in care for our most critical heart and vascular patients. This level of access, “close to home”, will help save lives and save patients’ the time, money and stress of travelling to Omaha or Des Moines.

Advanced equipment will allow us to drive patient-focused care with minimally invasive surgical procedures here. Our existing integral multidisciplinary team will provide additional treatments for those suffering from complex cardiovascular diseases.

Our new Comprehensive Suite will allow cardiologists, cardiovascular surgeons, imaging and their teams to work side by side in the same room, at the same time, all while providing a new, private place for our patients and waiting spaces for their families and loved ones.

Benefiting Southwest Iowa:

- ✓ Deliver improved and FASTER heart and cardiovascular care
- ✓ Shortened Procedure Times
- ✓ Reduced Hospital Stays
- ✓ Availability of High-Tech Imaging and Diagnostic Equipment
- ✓ The Most Advanced Technology and Equipment Available in Southwest Iowa
- ✓ Improving the Patient and Family Experience
